Management Summary

Description	VMware vSphere Cloud Infrastructure

Operating Systems

RHEL

Operating System	Model	Installed/Running	Number of Instances
Red Hat Enterprise Linux	10	Yes	1

Windows Server

Operating System	Model	Installed/Running	Number of Instances
Windows Server	2022 Datacenter (desktop)	Yes	2

Windows Desktop

Operating System	Model	Installed/Running	Number of Instances
Windows Desktop OS	11 Pro	Yes	2

Wazuh Server

Operating System	Model	Installed/Running	Number of Instances
AWS Linux	2	Yes	1

Endpoints and Specialized software

Operating System	Software	Installed	Validation
Windows Server 2022	Active Directory Domain Services	Yes	Verified
RHEL 10	Postgresql Server	Yes	Verified
RHEL 10	Nessus Vulnerability Scanner	Yes	Verified
Wazuh Linux Server	Wazuh SIEM and EDR	Yes	Verified
(All) Windows PC	Office Suite (WPS or Libre)	Yes	Verified

Domain Controller

A domain controller is a server that hosts directory services for a network and is responsible for authenticating users and computers, managing security policies, and controlling access to network resources. It enables administrators to manage the network from a single point.

Operating System Name	Windows Server
Model	2022 Datacenter (desktop)
Domain Controller Verified	Verified

Information regarding Domain Controller

Server	Windows Server 2022 Datacenter (desktop)
Domain	gulfcoastdent.local
Login	username@gulfcoastdent.local
Domain Controller IPv4 Address	[redacted]

Computers authenticated on the Domain Controller

Operating System	IPv4	IPv6	MAC Address	Description/Name
RHEL 10	[redacted]	[redacted]	[redacted]	SQL Server
Windows 11 Pro	[redacted]	[redacted]	[redacted]	Front Desk Desktop
Windows 11 Pro	[redacted]	[redacted]	[redacted]	Room Desktop
Windows Server 22	[redacted]	[redacted]	[redacted]	Redundant DC

Information regarding Redundant Domain Controller

Server	Windows Server 2022 Datacenter (desktop)
Domain	Gulfcoastdent.local
Login	username@gulfcoastdent.local
Backup DC IPv4 Address	[redacted]

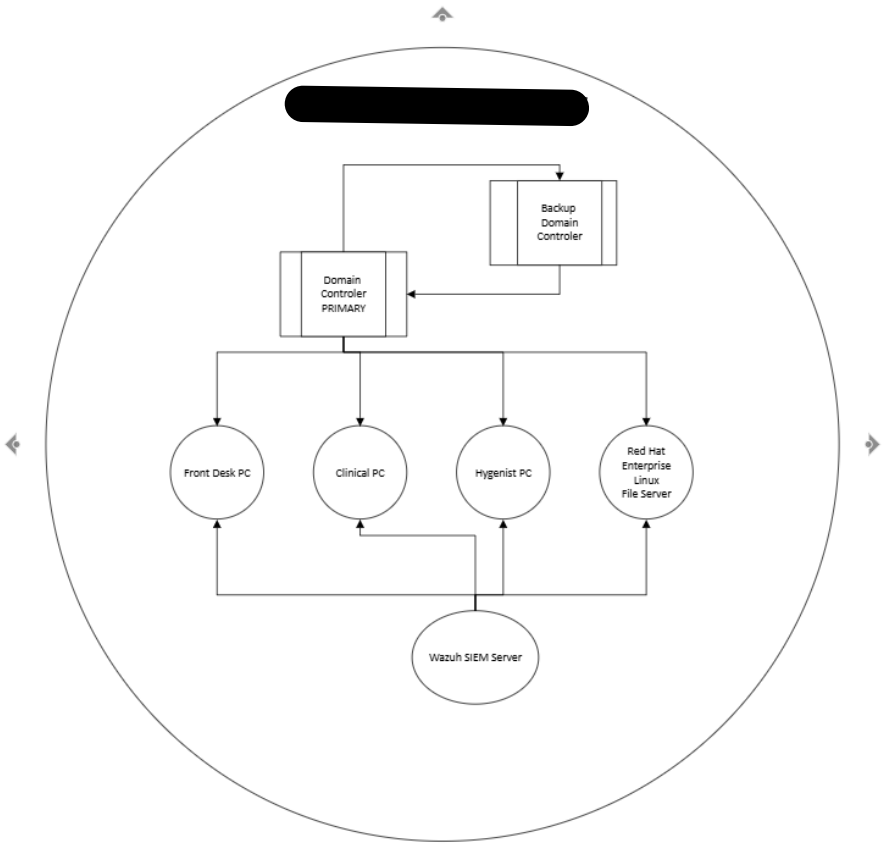
Network Design and Implementation

The following IPv4 address, IPv6, and MAC address are the actual address of each of the machines. Also with this is a description or name of the computer.

Operating System	IPv4	IPv6	MAC Address	Description/Name
RHEL 10	[redacted]	[redacted]	[redacted]	SQL Server
Windows Server 22	[redacted]	[redacted]	[redacted]	Domain Controller
Windows 11 Pro	[redacted]	[redacted]	[redacted]	Front Desk Desktop
Windows 11 Pro	[redacted]	[redacted]	[redacted]	Room Desktop
Windows Server 22	[redacted]	[redacted]	[redacted]	Redundant DC

Diagram of Domain Controller and Network

Below is a diagram of the domain controller. It shows the relationship between the DC and the PC that are connected to the DC. It also shows the relationship between the SIEM computer and how it communicates work with the Windows PC.

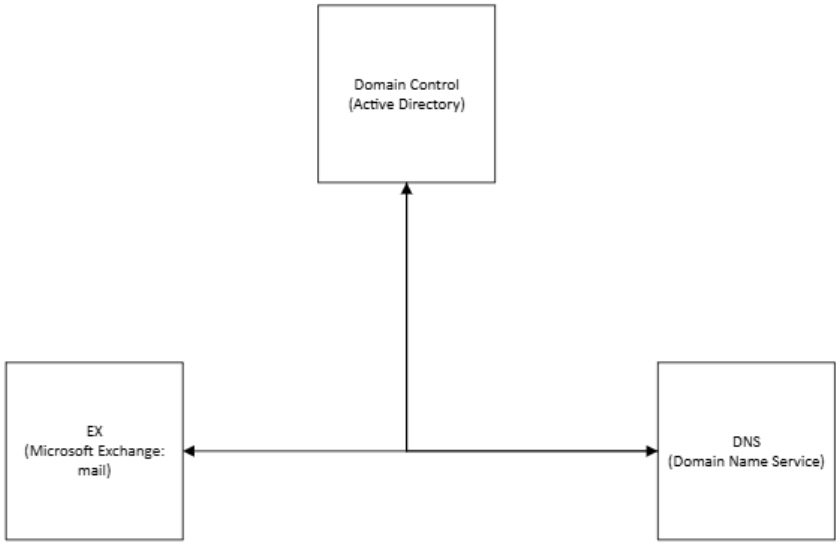


The circle is the network. It holds the IPv4 address range of [redacted] The domain controller also has a backup. If the primary domain controller goes down, the secondary (or backup) will immediately take its place and continue the communication to the PC's on the network. The only PC that is not in the DC is the Wazuh SIEM server. It is only on the network and it communicates to all end devices on the network (but does not contain any active directory service from the DC like the other devices on the network).

Domain Controller purpose and diagram

Microsoft DC has three specific purposes:

1. **AD (Active Directory)** - stores information about users, computers, groups, and permissions in the domain. It helps the domain controller know who can sign in and what they are allowed to access. In simple terms, AD is the system that organizes and manages the network.
2. **EX (Exchange Server**) - is Microsoft's email system that can provide company email, calendars, and contacts. It is often connected to the domain controller so users can sign in with their domain accounts and use the same network identity for email. In simple terms, Exchange handles communication services, while the domain controller helps manage the user accounts behind them.
3. **DNS (Domain Name System)** - helps devices find servers and other computers by name instead of only by IP address. A domain controller depends on DNS so computers can locate the domain and log in correctly. In simple terms, DNS is what helps everything on the network find the domain controller.



Storage and Memory

Each OS has the following Storage volume/sizes.

Operating System	Storage	RAM
RHEL 10	90 GB	4 GB
Windows Server 2022 Datacenter Desktop	90 GB	12 GB
Windows Server 2022 Datacenter Desktop (Backup DC)	90 GB	16 GB
Windows 11 Pro (Front Desk)	90 GB	16 GB
Windows 11 Pro (Room Desktop)	90 GB	16 GB

Database

PostgreSQL

- Relational Database Management System (RDBMS / database server)
- This stores the data, runs queries, manages transactions, handles users/permissions, and supports extensions.

PostgreSQL Users/Roles

Role Name	Attributes/Permissions
administrator	Create DB
postgres	Superuser, Create Role, Create DB, Replication, Bypass RLS
sentinel	N/A

DBeaver

- Universal Database Client Tool
- A graphical user interface (GUI) that lets you connect to, browse, query, and manage many different databases.

Database contents

Tables

employees	job types	patients	positions
last_name	job_type_id	pid	position_id
first_name	job_type_name	customer_first_name	position_name
emp_id		customer_last_name	job_type_id
posiiton_id		number_of_visits	
status			

Data types

Employee status
part_time
full_time
discontinued

Security

There have not been any security policies put into place yet except for:

- Group Access Policies
- Password Polices
- Account Lockout Policies

Policies Enforced by Active Directory

Policy	Policy Setting	Configuration Source
Audit Policies	Not Defined	Configured Locally
User Rights Assignment	Not Defined	Configured Locally
Security Options: Allow anonymous SID/Name translation	Disabled	Configured Locally
Security Options: Force logoff when logon hours expire	Disabled	Configured Locally

Password Policies

Policy	Policy Setting
Enforce password history	24 passwords remembered
Maximum password age	42 days
Minimum password age	1 days
Minimum password length	7 characters
Minimum password lenth audit	Not Defined
Password must meet complxity requirements	Enabled
Relax minimum password length limits	Not Defined
Store passwords using reversible encryption	Disabled

Account Lockout Policies

Policy	Policy Setting
Account lockout duration	5 minutes
Account lockout threshold	5 invalid logon attempts
Allow Administrator account lockout	Enabled
Reset account lockout counter after	5 minutes

Software and Others

Installed Software

Operating System	Software	Info
RHEL 10	Nessus Vulnerability Scanner	Administrative Privileges
RHEL 10	DBeaver – database viewer	Administrative privileges
Windows VM's	WPS Office	Basic office application for all user accounts

Website

Website URL	Pages	Extras/Status
https://pccgulfcoastdentistry.4micah.net/	Home	Completed
	About Us	Completed
	Legal	Completed
	Patient Portal	In Progress
	Contact us	Completed
	Make an Appointment	Completed

Passwords

Servers

Admin Accounts

Machine	Username	Password
RHEL	[redacted]	[redacted]
RHEL (DB)	[redacted]	[redacted]
WIndows Server 2022	[redacted]	[redacted]
Windows Server 2022 (DC)	[redacted]	[redacted]

User Accounts (by Domain Controller)

Clinical

Name	Username	Password
Sarah Whitman	swh[redacted]	[redacted]
Jasmine Patel	jp[redacted]	[redacted]
Laura McConnell	lmco[redacted]	[redacted]
Denise Alvares	dal[redacted]	[redacted]
Hannah Brooks	hbr[redacted]	[redacted]
Kevin O'Neil	ko[redacted]	[redacted]

IT and HR

Name	Username	Password
Karen Mitchel	[redacted]	[redacted]
Thomas Reynolds	[redacted]	[redacted]

Dentists

Name	Username	Password
Michael Lawson	[redacted]	[redacted]
Emily Chen	[redacted]	[redacted]
Robert Hayes	[redacted]	[redacted]
Angela Morales	[redacted]	[redacted]

Logging into Windows PC's Using Domain Controller

Domain Controller

The Domain Controller allows users to log into any pc they have permissions to using the same username and password. the company domain is: gulfcoastdent.local.

Logging into Windows

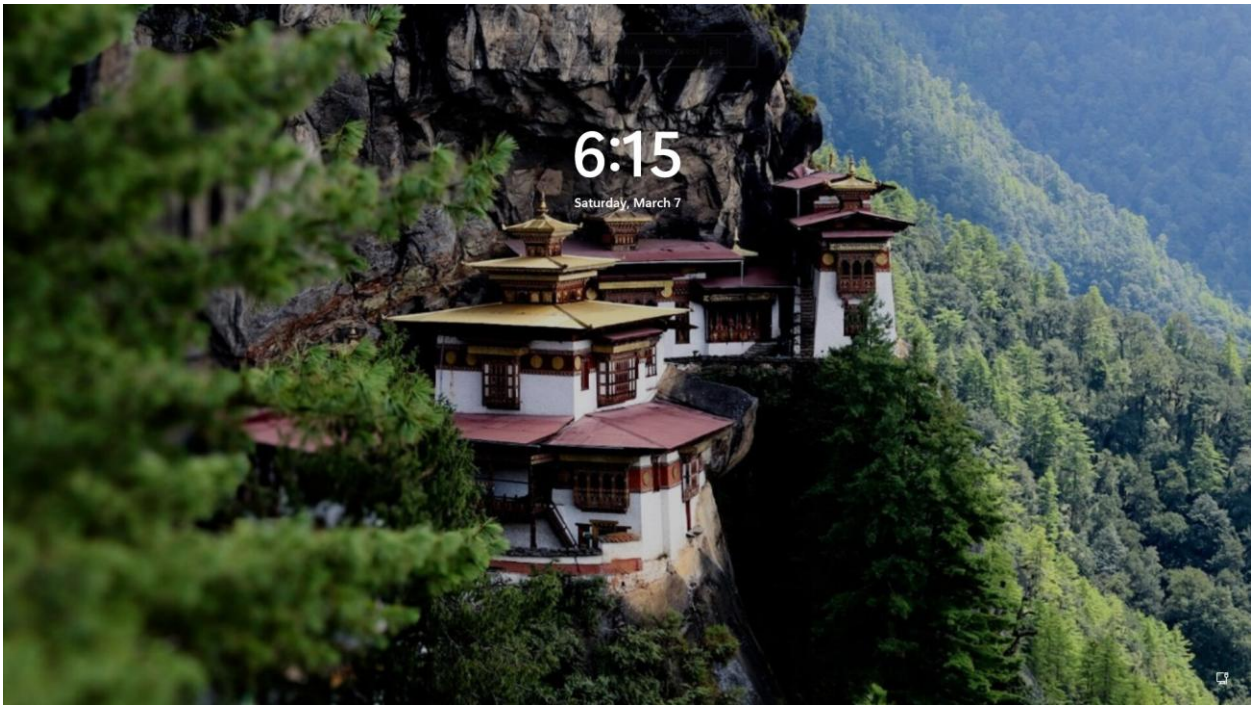
To log into windows, the user will have to log in using the Domain of Gulf Coast Dental. To do so you will have to follow the format. We will use John Smith as an example to show how to log in (not a real user on the Gulf Coast Domain)

First letter of First Name	Full Last Name	Domain
J	Smith	@gulfcoastdent.local

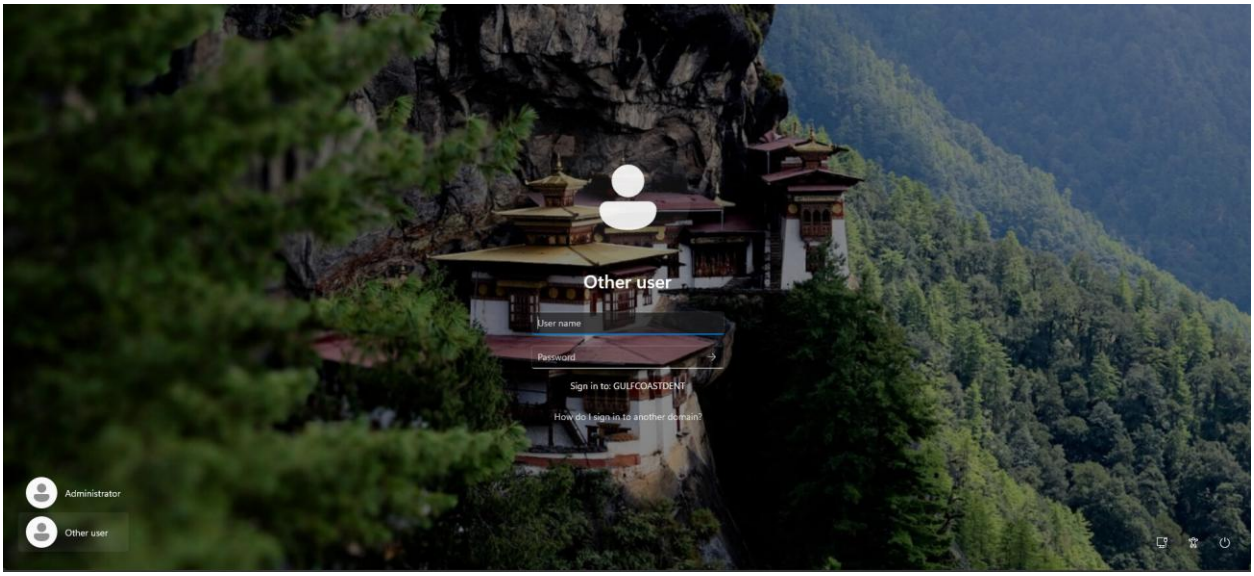
Thus, when put together you will have the following username: jsmith@gulfcoastdent.local.

Steps to Log into PC

To log into the PC, press the power button. Once this happens , you will see the windows logo on boot. Wait for the lock screen (picture below).



Once you see a screen like this with time (background may vary) press CTRL + ALT +DEL. Then you will to the screen to login page.



You will type in your username given the following format stated in the above section. You will also enter in the password to your account. Upon successful login, you will see the Windows 11 Desktop.
